

Academic Word List generalising/ hedging practice

Choose one of the lines from the list of AWL vocabulary on the two pages below, and make a generalisation using those words or on that topic. The part in brackets is optional. Be careful to make the generalisation accurate, including your level of (un)certainty. Your partner will attempt to make you change your statement by arguing that the statement should be stronger or weaker, by asking questions, etc, with language like that in the box.

Useful language for discussing generalisations

- I'd say.../ But isn't it more like...?/ I'd change that statement (slightly) to say...
 - Do you (really) mean (to say)...
 - How common do you think that is?
 - How sure are you about that?/ What makes you so sure/ unsure?
 - I think it's (slightly/ quite a lot/ a lot/ far) more/ less common than that.
 - I think that's a bit of an overgeneralisation/ exaggeration./ Isn't that (a bit of) an oversimplification?/ That is a bit of a stereotype, isn't it?
 - I think you can be more certain about that. – I don't think you can be so sure about that.
 - I wouldn't go so far myself. – I'd go further and say...
 - Is it really so much/ many/ little/ often/ seldom/ likely/ unlikely?
 - Isn't that a bit out of date?
 - That's a bit vague./ I think you could be more precise.
 - What makes you think that?/ What evidence is there that...?/ Do you have any figures on that?
-
- abandonment (of pets)
 - abstract art
 - abstracts (in academic papers)
